Sequence 11, Application US/09004838
Patent No. 6350933
GENERAL INFORMATION:
APPLICANT: Michelmore, Richard W.
APPLICANT: Shen, Kathy
APPLICANT: Bhen, Kathy
APPLICANT: Procedures and Materials for
TITLE OF INVENTION: Procedures and Materials for
TITLE OF INVENTION: Conferring Pest Resistance in Plants
NUMBER OF SEQUENCES: 140

Sequence 2, Application US/08930996A

Patent No. 6100449

GENERAL INFORMATION:
RAPLICANT: ESHED, Yuval

APPLICANT: ESHED, Yuval

APPLICANT: PARAN, Ilan

APPLICANT: ZAMIR, Daniel

TITLE OF INVENTION: A GENE FAMILY PROM THE 12 FUSARIUM RESISTANCE

TITLE OF INVENTION: LOCUS OF TOMATO AND USE THEREOF FOR TRANSFORMATION AND TITLE OF INVENTION: SELECTIVE BREEDING OF TOWATO AND RELATED PLANTS

NUMBER OF SEQUENCES: 12
                                                                                                                                                                                                                     SDIPVKNLARSWAMAEGFL--KLENDLEGEVEKCLQELVDRCLVLVSKRSRDGT--KIRSC 472

The invention relates to novel broad-spectrum resistance gene Pi2 and the NBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a cDNA encoding a rice NBS2 polypeptide.
                                                                                                                                                                           180

The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present DNA sequence represents an NBS gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      835
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  955
                                                                                                                    The invention relates to novel broad-spectrum resistance gene P12 and the NBS(1-6) genes present in the P12 gene cluster region. The rice P12-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a P12
molecule that confers
or enhancing disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GGTATATCAAAGATGAGCTAAAAACAATGCAGGCATTCCTTAGAGCTGCTGAAGTTATGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel broad-spectrum resistance gene Pi2 and the NBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a cDNA encoding a rice NBS4 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    molecule that confers
or enhancing disease

                                                                                                                                                                                                                                                                                                                                                                                                                        235
                                                                                                                                                   The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present DNA sequence represents the Oryza minuta

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11962
```

The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present DNA sequence represents an NBS gene from Nucleic acids encoding nucleotide binding site (NBS) proteins NBS1, NBS2 and NBS3, useful for producing plants resistant to Magnaporthe grisea GGTGAAACTTAGAGGGGCCACCGGATCGCTATCCGTATCCACAACCTCAAATCAAGAGT GTATATCAAAGATGAGCTAAAAACGATGCAAGCATTCCTTAGAGCTGCTGAACTTATGAA AAAGAAAGATGAACTATTAAAGGTTTGGGCAGAGCAAATACGTGACCTGTCGTATGACAT AAAGAAAGATGAACTATTAAAAGGTTTGGGCAGAGCAAATACGTGACCTGTCATATGACAT TGAAGATTCCCTTGATGAATTTAAAGTCCATATTGAAAGCCAAACCCTATTTCGTCAGTT TGAAGATTCCCTTGATGAATTTAAGGTCCATATTGAAAGCCAAACCCTATTTCGTCAGTT GTATATCAAAGATGAGCTAAAAACAATGCAGGCATTCCTTAGAGCTGCTGAAGTTATGAA nucleotide binding site; NBS; Pi9 gene; bacterial blight; rice blast; plant breeding; transgenic plant; plant; gene; ds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TGTGCCACAGCCTCACTGGTGTACCACCTTGATTTCTTGCAGATGAACGATGCCATTTCA 1026
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GGAGCTGTGCTTGCAACTAAACAGGTGTCAGAATGGGAGAAATTCTATGAACAACTTCCT 1206
                                                                                                The invention relates to novel broad-spectrum resistance gene Pi2 and the MBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants: The present sequence represents a cDNA encoding a rice NBS6 polypeptide.
                      nucleic acid molecule that confers
for creating or enhancing disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GATGGTCCGGCCAAGGTAATCTGTGTTTGTGATGGGTGTGTTTAGGCAAGACAGCTCTT

```
The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grisea in plant breeding programs. The present DNA sequence represents an NBS gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                GCCTCTGCCGCTGCCAATGAGACGAGCCTCCTGCTCGGCGTCGAGAAGGACATCTGGTAT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      398
```

```
The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grisea in plant breeding programs. The present DNA sequence represents an NBS gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 GCCTCCGCCGCCGCCGACGAGGCCACCCTCCTGCTCGGCGCGTCCAGAAGGAGATCTGGTAC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel broad-spectrum resistance gene Pi2 and the NBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a cDNA-21 fragment from the Pi2 region, that matched to NBS4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      $
                                                                                                                                    The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grisea in plant breeding programs. The present DNA sequence represents an NBS gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GCCTCTGCCGCTGCCAATGAGACGAGCCTCCTGCTCGGCGTCGAGAAGGACATCTGGTAT 120
